vendor-category rows

? Net GMV was \$87,108 in the latest week, with -85.7% vs. previous week.

? 13 stores are below the P25 productivity level and need a clear recovery plan.

? Stock-outs are the largest risk: estimated lost GMV is \$47,958,315.

Executive message

Focus first on store productivity, stock availability, and vendor profitability.

? Use country, format, region, and date filters to explain the difference between markets.

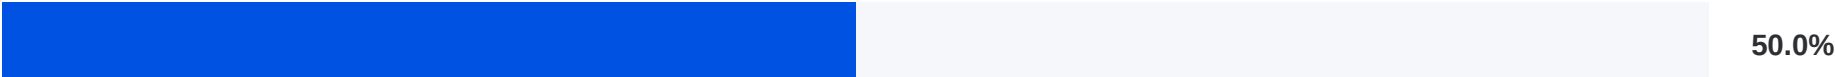

? Rank stores by GMV per square meter inside each format, not only by total GMV.

? Stores below P25 should be colored red automatically in the ranking visual.

- ? Operations can recover 13 stores with weekly productivity actions.
- ? Merchandising should review 120 vendor-category groups with poor capital return.
- ? Loyalty cohorts show M3 retention at 50.0%; this can guide targeted campaigns.

Electrónica

MISSING CUSTOMER ID

59.8%

loyalty data risk

NON-COMPLETED TX

2.0%

excluded from KPIs

? Stock-out risk is material: Electrónica has \$25,196,741 estimated lost GMV.

? Missing customer IDs affect 59.8% of transactions and reduce retention quality.

? Non-completed transactions represent 2.0% of records and must stay excluded.

Risk rule: do not scale recommendations without weekly refresh and data quality checks.

Owner	Action	When
Operations	Recover 13 stores below P25	30 days
Merchandising	Review 120 low-GMROI groups	45 days
Supply Chain	Fix top 500 stock-out gaps	14 days
Analytics	Publish Power BI dashboard	7 days

Expected outcome

Reduce the \$47,958,315 lost GMV pool and improve GMV/m[†] visibility weekly.
